Chilled Water Air Conditioning

Giving you complete control

More than just another air conditioning company.

We're dedicated to pioneering innovative new technologies and creating market-leading, easy-to-use solutions that offer you complete control.

Temperzone's ECO Water Chiller range: making short work of long pipes

Take a large commercial space like an airport or hospital, and there's no escaping the need for vast extended networks of air conditioner piping.

The question therefore becomes:

How can climate control performance be maximised? After all, traditional refrigerant suffers a dramatic performance loss due to the pressure drop that occurs the further it travels.

The answer is chilled water, which enables near loss of cooling performance when pumped over extended pipe lengths.

Ranging in capacity from 4kW to 215.6kW, Temperzone's ECO Chilled Water range harnesses the power of chilled water to deliver unprecedented levels of climate control capability.

Utilising a fan coil unit that passes water through a heat exchanger at 6 to 12°C*, the Temperzone range is also the ideal choice for commercial buildings that struggle to accommodate multiple outdoor units.

And while offering superior performance in large commercial settings, our smaller chilled water fan-cooled unit is ideal for confined spaces like hotel rooms, where limited wall or ceiling cavity sizes would normally provide serious installation challenges.

*Contact Temperzone for Applications

How we manage to combine superior performance and energy savings

In the complex world of chilled water technology, higher water temperature equates to higher cooling efficiency.

With Temperzone's fan coil unit having the ability to accommodate water temperatures as high as 12°C*, it's no surprise that our chilled water systems are increasingly forming an integral part of sustainable energy strategies.

Significant energy and cost savings also stem from the unique capability to reduce fan speed as room temperature drops, meaning that the unit only works hard when you need it to. This type of scenario simply isn't possible with AC fan-equipped units, which only tend to have limited fixed setting capabilities. Most Temperzone chilled water units also incorporate EC fans, which are renowned for their high efficiency when compared to the traditional AC alternative.

*Contact Temperzone for Applications

The IXDL zoning advantage

An integral part of the Temperzone ECO Chilled Water range, IXDL is the Premium chilled water fan coil on the market that allows you to individually zone different areas.

Incorporating multiple fans within each unit, IXDL allows you to set different temperatures for different rooms within the same building simultaneously.

For example, a hospital application might see different zones allocated for areas such as doctors' rooms, patient wards, food preparation areas, and laboratories. Similarly, a hotel application might see zones allocated for areas like reception, conference and ballrooms, restaurants, and gym areas.

It's just another way Temperzone is putting the power of individual control into the hands of the user.

Other key benefits:

- The ability to accommodate a **wide range of water temperatures** thereby **enabling greatly improved chiller efficiency**.
- **Ease of use.**
- **Precise** comfort and temperature control capability.
- The ability to **significantly reduce noise levels** by limiting fan speed.
- The ability to **gradually reduce fan speed**, ensuring that changes in noise levels are unnoticeable.
- **Ease of servicing** due to simple design and small number of components.

Why Temperzone?

As innovative market leaders in air conditioning technology development, Temperzone is ideally positioned to play a partnering role in your commercial projects and to ensure you select the right solutions for your needs.

Because our systems are all designed, manufactured and supported using home-grown expertise, you can always rely on the convenience of ready availability and easily accessible technical support.

Technological advancements

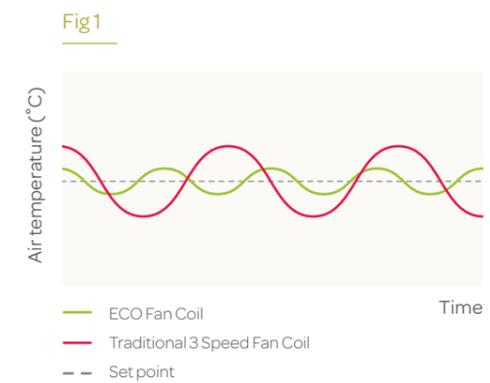

Chilled Water Units

Efficiency and Comfort

The stepless modulation capability of EC fan speeds make it possible to accurately regulate air volume in strict relation to a room's real air conditioning requirements. This also enables temperature and humidity fluctuations to be significantly minimised, leading to superior comfort levels.

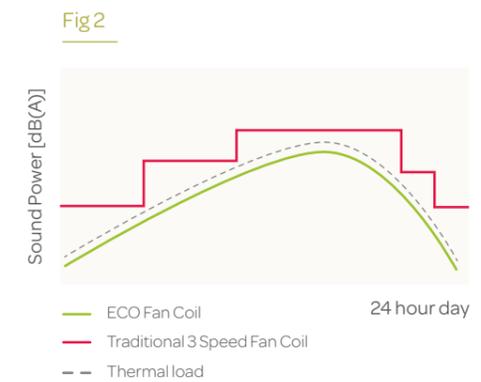

See figure 1

Quiet Operation

Our aerodynamically-optimised EC fans respond to changes in occupied space thermal loads by creating a continuously modulating airflow, leading to greatly reduced noise levels.

See figure 2

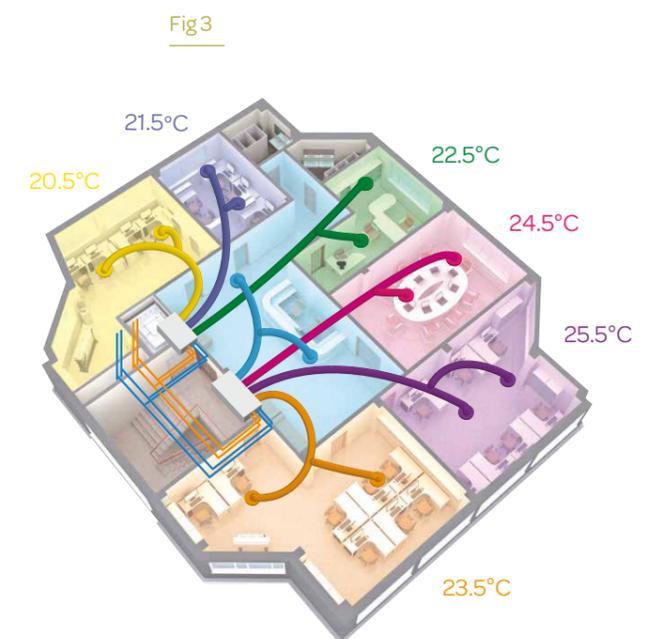

Zone Temperature Control

Our IXDL system's individual zoning capacity enables you to find the perfect balance between energy savings and comfort levels.

See figure 3

Energy Savings

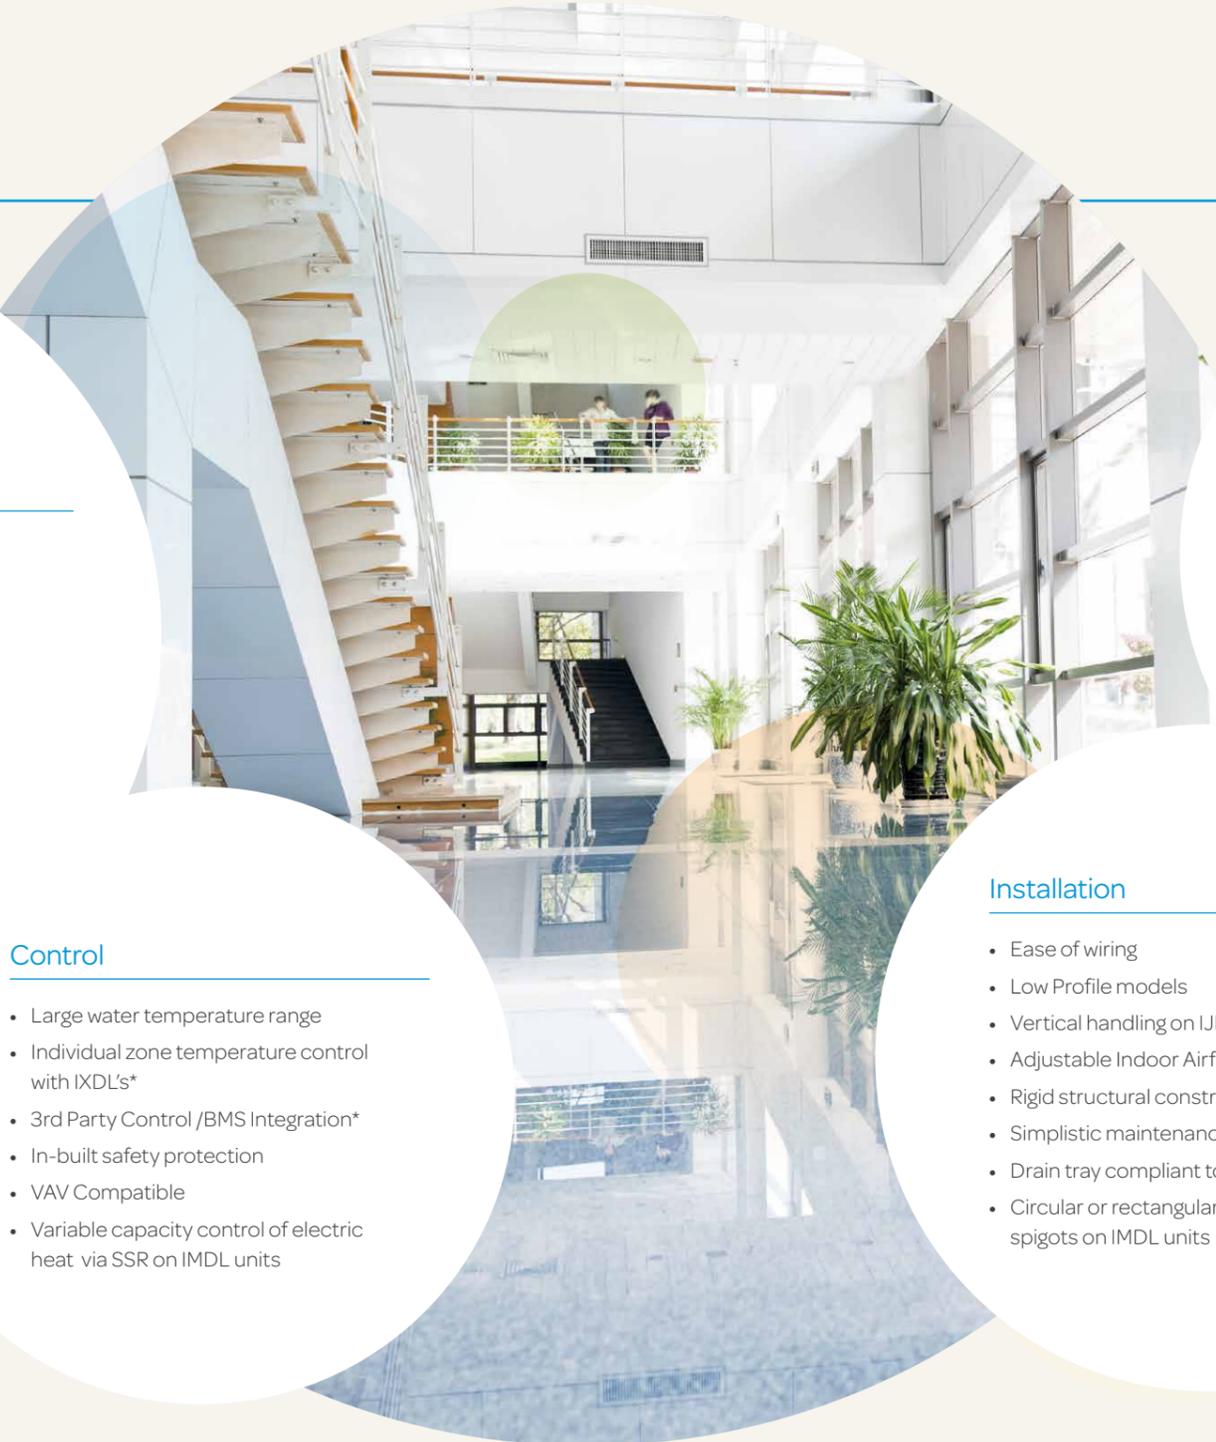

Depending on project specifics, the employment of Temperzone EC technology can lead to energy savings of up to 70%.

ECO Features

Chilled Water Units

Versatility

- Flexible handling configurations
- High static Indoor fans up to 300Pa**
- Powder coated panels to withstand 1000 hour salt spray test optional
- Galvanised Steel construction
- AS1530.3 compliant Insulation
- High outside air application*
- Glycol and Low Temperature application

Control

- Large water temperature range
- Individual zone temperature control with IXDLs*
- 3rd Party Control /BMS Integration*
- In-built safety protection
- VAV Compatible
- Variable capacity control of electric heat via SSR on IMDL units

Installation

- Ease of wiring
- Low Profile models
- Vertical handling on IJD
- Adjustable Indoor Airflow control
- Rigid structural construction
- Simplistic maintenance with Access Panels
- Drain tray compliant to AS/NZS 3666
- Circular or rectangular connection spigots on IMDL units

Efficiency

- High Efficiency EC Motors*
- Epoxy coated Evaporator Coils
- Advanced Rifle bore Copper Tubes
- Foil face polyurethane insulation

EC Fans*

- Increase energy savings at part load conditions with variable 0-10V dc control signal
- Increase fan reliability and efficiency by soft starting
- Superior noise attenuation with forward curved fans.

Coils

- Superior epoxy coated fins and advanced rifle bore copper tubes
- Increase coil reliability with split cooling and heating coils
- Wide choice of coil configuration**

Sheet metal

- Durable polyester powder coated galvanised steel cabinet option
- Leak free hinges access door construction
- Easy service and maintenance access using panels.

Insulation

- Highly durable foil faced insulation to ensure no particles are introduced into the air stream
- Low noise attenuation material fitted with the individual supply air plenum chambers
- Meets fire test standards AS 1530.3 (1989) and BS 476 parts 6 and 7.
